Citizenship: Argentina · Italy (EU Passport)

EXPERIENCE

Software Developer — Sep 2023 – Present
Operations Manager — Sep 2019 – Present

Rugidos Fiestas Tandil · Events SME, Tandil, Argentina

- Designed, built and maintain the company's commercial website, in production: first version in 2023 (HTML, CSS and JavaScript) and a full redesign in 2026 with Next.js, TypeScript and Tailwind CSS, with my own UX/UI design, optimized for mobile devices and local search. ■ Website
- Built FreeMagicMirror (Python, Kivy, OpenCV), a touchscreen photo booth application in use at the venue, distributed as a portable Windows executable. ■ Repository ■ Video
- Manage daily operations: event organization, internal process optimization and service model improvements, some of them implemented with in-house software.

Freelance Full Stack Developer — Dec 2025 – Jun 2026

SeViVe · Pilates studio (franchise), Canning, Argentina

■ Repository ■ Video

- Built, as the sole developer, a booking and management application with more than 200 users, from client acquisition and requirements definition to production launch.
- Bookings with concurrency control to prevent overbooking, expiring credits, recurring slots with automatic booking and a calendar with configurable holidays.
- Automatic merging of accounts created by the administration with the student's own account at sign-up (by national ID), preserving history, credits and slots.
- Asynchronous backend with Python, FastAPI and PostgreSQL; Flutter application installable as a PWA, with Google sign-in through Firebase. Docker Compose and Nginx on a self-managed VPS.
- Since development ended, responsible for support, server administration and client-requested updates.

Freelance Web Developer — Mar 2026 – Apr 2026

Navkok Security Group SRL · Private security company, Argentina ■ Repository ■ Preview

- Redesigned the corporate website of a company with more than 30 years in business and ISO 9001, 14001 and 45001 certifications, from selling the project to its completion.
- Defined the information architecture and the UX/UI design, wrote the corporate copy and produced the multimedia content with AI tools. Technologies: Next.js, React, TypeScript and Tailwind CSS.

FEATURED PROJECTS

Ask Leonardo da Vinci — Next.js · React · TypeScript · Three.js · RAG · Python

■ Repository ■ Website ■ Video

Leonardo da Vinci left more than 7,500 written pages. For the first time, software uses them to speak with him without inventing answers: a neural network turns each question into a vector, finds among 1,565 passages from his notebooks the ones that answer it, and the system checks that every quotation exists in the original. With the same model and the same questions, an AI acting as Leonardo makes up 96.9% of its quotations; Ask Leonardo da Vinci, 0 of 187. Includes a 3D library, a 3D virtual museum and a 3D vector space, available in English and Spanish. RAG pipeline built from scratch and continuous integration with GitHub Actions.

Inversiones en Argentina Python · FastAPI · Gemini · Jev (TypeSafe) · PostgreSQL/pgvector · GitHub Actions · Next.js

■ Repository ■ Website ■ Video

Uses AI to track private investments in Argentina, previously scattered across news outlets, X accounts and official registries. A scheduled GitHub Actions workflow gathers material from a range of sources and sweeps the web for investment mentions with Gemini and Search Grounding. A layered system decides what gets published: Gemini structures each mention, pgvector retrieves the closest records, and identity rules together with Jev (TypeSafe) resolve what is a real investment and what is already published under a different name. Publishing runs unattended, to the website and a Telegram channel, with a FastAPI API and a Next.js frontend with server-side rendering, on Vercel.

Datos Pauta Oficial Python · ETL · SQLite · Astro · React · TypeScript · Cloudflare

■ Repository ■ Website ■ Video

The first and only unified database of Argentine government advertising: 540,413 advertising orders from the national government, Buenos Aires City, Buenos Aires Province and Santa Fe (2003–2025), with amounts adjusted for inflation (CPI). Python ETL with a Buenos Aires Province 2020–2024 dataset reconstructed from more than 500 PDF resolutions, data that does not exist in any open data portal. Backendless architecture: the SQLite database (~173 MB) is hosted on Cloudflare R2 and the browser queries only the bytes it needs through HTTP Range Requests.

FaceHunt 2 Python · Computer Vision · Deep Learning · ONNX Runtime · FastAPI

■ Repository ■ Video

A facial recognition system with AI and deep learning that, from a photo, finds every appearance of a person in hours of video, even in profile, partially covered or at low resolution. It is a desktop application: the analysis runs on the computer, with no servers or cloud, on a local file or a YouTube video, and returns exact time ranges with a thumbnail and direct access to each moment. It uses InsightFace (ArcFace, 512-dimensional embeddings) on ONNX Runtime, with GPU acceleration based on the available hardware and cross-frame tracking. Full rebuild of the first version, FaceHunt (2025), migrating from TensorFlow on CPU to ONNX Runtime on GPU.

EDUCATION

Systems Engineering **2022 – Present**

UNICEN (National University of Central Buenos Aires Province)

TECHNICAL SKILLS

Programming Languages Python · TypeScript · JavaScript · SQL · Java · HTML · CSS

Backend & Data FastAPI · REST APIs · PostgreSQL · pgvector · SQLite

AI LLMs · RAG · Gemini API · Embeddings · Jev (TypeSafe) · Computer Vision (InsightFace, OpenCV)

Frontend & Mobile React · Next.js · Astro · Tailwind CSS · Three.js · Flutter

Design UX/UI · Responsive design · Information architecture

Testing & DevOps pytest · Vitest · Playwright · Docker · Nginx · Linux/VPS · Git · GitHub Actions (CI/CD) · Vercel · Cloudflare · Firebase

CERTIFICATIONS & LANGUAGES

Scrum Fundamentals Certified (SFC) **Feb 2024**

VMEdu

Languages: Spanish (native) · English (B2, Upper Intermediate)
